Has the Pt Lonsdale golf course had an adverse impact on the natural values of that area?

This is a project I have not had detailed involvement with. I understand some revegetation and protection of vegetation has taken place to offset the golf course. I would refer to CoGG Planning Dept and DELWP for further info

Would a formal trail outside the park assist in access to conservation volunteers?

Yes I believe there is a chance to add members to existing groups or perhaps start a new 'Friends of Group'. So there is some positives to be gained in terms of new volunteers.

Do you think that accessing Buckley Park for volunteers to work there would actually disturb the wilderness and biodiversity or improve it?

Yes it has the potential to disturb sensitive areas. However there are some sites that are less sensitive where I believe it would be appropriate and not detrimental.

Are you working with Moremac on revegetation of The Point? Yes – we are removing woody and invasive weeds and involving the community in planting days, Gardens for wildlife and other activities

People introduce weeds. Would a defined path help control accidental infestations? IT has the potential to help for sure – just depends on where it is etc

Have you done any work on 322 Shell Road?

No
